Education

Lassonde School of Engineering, York University — Toronto, ON
Bachelor of Engineering (Honours), Mechanical Engineering — 2023 – 2027

Work Experience

Steamoji Newmarket, Business Development Associate — October 2026 – Present
- Driving pre-launch growth for Steamoji Newmarket by generating leads and supporting funding applications.

Steamoji Kelowna, Robotics Curriculum Developer | *VEX IQ, VEXcode IQ* — July 2026 – October 2026
- Authored step-by-step robotics curriculum for learners aged 12 and up across VEX IQ, Dogzilla Lite, myCobot 280, and Litebee drone platforms, including an eight-project VEX IQ autonomous programming series.
- Designed the programming sequence to build from a single drive command to a full sensor-driven decision loop.
- Tuned colour-detection thresholds to readings measured under the academy's own lighting, and reworked three projects around the two-motor Clawbot build following client review.

FanRyng, Strategy Lead — August 2026 – September 2026
- Led fan engagement research across 11 Indiana NCAA D1 schools, developing a scoring methodology that ranked mini-game and prize options by sponsor fit and audience relevance.
- Built school-specific fan profiles from census and behavioural data to recommend a hybrid engagement strategy, balancing scalable core content with school-level customization.

Owning My, Client Acquisition Researcher — April 2026 – May 2026
- Researched and evaluated C-suite acquisition channels for an AI leadership coaching firm, developing an Ideal Client Profile and synthesizing market trends, including a finding that 54% of B2B shortlists are AI-influenced, into a research brief.
- Co-developed a client acquisition strategy deck comparing direct mail, contextual ads, and AI visibility to recommend a thought leadership model for reaching executives.

Harvel Solutions, Tile Apprentice — August 2024 – September 2025
- Assisted in masonry and tile installation on active job sites, working from technical drawings to meet layout and safety specifications.

Projects

Capstone: Laser Weeding Robot for Homes and Small Farms — Fall 2026 – Present
- Building a battery-powered laser weeding robot with a trainable computer vision weed identifier and emergency stop.

IoT Solar Tracking System | *Arduino MKR 1010, Sensors, CAD* — Winter 2026
- Designed and built a floating solar platform with autonomous sun tracking to improve energy capture.
- Integrated light sensing with dual-axis servo actuation and implemented wireless monitoring via Arduino IoT Cloud.

Automated Security and Object Tracking System | *LabVIEW, DAQ, Sensors* — Fall 2025
- Built a LabVIEW control system integrating ultrasonic sensors and DAQ hardware for two-axis object tracking.
- Documented calibration and testing results and prepared improvement notes for future iterations.

Remote-Controlled Medical Rover | *Arduino, Ultrasonic Sensors* — Winter 2025
- Designed and prototyped a medical transport rover with Ackermann steering for navigation and obstacle avoidance.
- Recorded test data, created wiring diagrams, and wrote build and troubleshooting documentation.

Skills

Programming	Python, Java, Arduino (C/C++), HTML/CSS, JavaScript (basic), VBA (basic)
Hardware	Arduino, servo motors, ultrasonic sensing, DAQ systems, basic control systems
Software	SolidWorks, AutoCAD, Fusion 360, STAR-CCM+, LabVIEW, MATLAB, Microsoft Excel, Git/GitHub
Coursework	Thermodynamics, Fluid Dynamics, Heat Transfer, Control Systems, Machine Elements Design

Extracurricular

Google Developer Group YorkU: Selected to attend an AI and infrastructure event at Google Toronto HQ (Aug. 2026)
Lassonde Bridge Building Competition: 2nd place with a structurally optimized bridge under load limits (Oct. 2023)
